"Building a More Equitable Future for All—Annual Report 2020/21." New York: Population Council, 2021.

This Annual Report is brought to you for free and open access by the Population Council.

A photograph of three young women, likely in a developing country, sitting together and looking at a document. They are wearing headscarves; one is blue, one is blue and green striped, and one is dark blue with red patterns. The background shows a simple structure, possibly a tent or a small building, with a dirt ground.

Building a More Equitable Future for All

ANNUAL REPORT 2020/21

The Population Council seeks to improve the health and well-being of current and future generations. For nearly 70 years, we have been at the forefront of scientific research, product development, policy analysis, and program design—working with partners around the world to co-create and implement solutions for a more humane, equitable, and sustainable world.

BY THE NUMBERS 2020

410

staff from a diverse range of professional, educational, and cultural backgrounds

60 %

of staff are based in an international office, affiliate, or independent organization

50 %

of staff hold doctorates or advanced degrees in an array of disciplines

159

peer-reviewed articles and commentaries

550

scholarly, policy, and patent citations

2,100

news and social mentions

POPULATION COUNCIL GLOBAL NETWORK

Julia Bunting
President

The Population Council responded to an unprecedented year with agility and resilience, most notably in deploying our Humanitarian Task Force to inform the COVID-19 response in 13 countries.

We leveraged our longstanding and trusted relationship with the Government of Kenya and our ongoing research cohorts to generate **real-time data** on populations disproportionately impacted by COVID-19, **informing national guidance** to meet evolving needs.

In the early weeks of the pandemic, we conducted rapid, phone-based surveys in Nairobi's informal settlements, delivering data that the Kenyan Ministry of Health used to inform its **behavior-change campaigns, COVID-19 tracking, and other interventions**.

The Council's **VoCes-19 survey** of more than 50,000 adolescents and young people in Mexico is providing health and government authorities with data on how the pandemic is impacting experiences and perceptions of violence and other social, economic, and health outcomes.

We also published a series of ground-breaking analyses of **US COVID-19 data**, shining a spotlight on gaps that perpetuate **inequities in prevention and treatment strategies**.

As the pandemic disrupted the lives, livelihoods, and life chances of millions of people around the world, we doubled down on our core mission—to **improve the well-being and health of current and future generations**—with a continued focus on addressing inequalities, many of which have been exacerbated by the pandemic. Here are a few examples of how we made a difference this year:

- Our research findings and recommendations strengthened the implementation of the DREAMS initiative to significantly **reduce HIV infection** in adolescent girls and young women.

- We launched the Evidence for Gender and Education Resource (EGER) online tool to drive **better education results** for girls, boys, and communities.
- We supported the delivery of effective, **evidence-based responses to sexual and gender-based violence in humanitarian settings**.
- We announced a license agreement that will expand access to Annovera®—the first and only contraceptive that provides an entire year of **protection against unintended pregnancy** while fully under a woman's control.

These achievements are only possible because of our relationships with more than 120 partners around the world. Among these:

- We expanded a **decades-long partnership** to develop a next-generation contraceptive vaginal system.
- We scaled a **community of practice** to strengthen adolescent girls' programs.

- Our colleagues in Kenya are continuing to lead a **vibrant South-North consortium** to generate evidence for ending female genital mutilation and cutting.

Important changes have also been happening across the Council. Following executive transitions in late 2020, I was honored to announce the appointments of Dr. Harriet Birungi as the Vice President of International Programs and Dr. Thoai Ngô as the Vice President of Social and Behavioral Science Research—respected Council leaders promoted to our executive team. The creation of the international programs division, and the decision for Harriet to lead that from her base in Kenya, is part of our ongoing journey to **shift our center of gravity to the places where we seek to have the most impact** and to becoming even more globally collaborative and inclusive.

As systemic racism and social and economic injustice came to the forefront of the world's collective consciousness, the Population Council identified new ways to advance our focus on equity. We launched our “**Agenda for Change**”—our commitment to becoming an antiracist

organization and addressing wider issues of diversity, equity, and inclusion. Led by staff across the organization, our Agenda for Change commits us to embrace antiracist principles and actions; to build a strong culture grounded in diversity, equity, and inclusion; to further decentralize our efforts to better meet the needs of the populations we serve; and to ensure our research continues to influence those who have the power and resources to improve the lives of the poorest and most marginalized people around the world.

Much of what we have learned over the last year will continue to shape our work and ways of working and will propel us in new directions—guided by our commitment to achieve an equitable future of health and well-being for all. I hope you enjoy learning more about these and other highlights and thank you for your continued commitment and support.

RAPID COVID-19 RESPONSE

→ The Population Council responded with urgency to the COVID crisis. We pivoted our **Humanitarian Task Force (HTF)** to:

- collaborate with national health ministries and government agencies;
- control the spread of the coronavirus; evaluate ways to prevent and mitigate infection; and
- assess health, social, and economic effects.

Focusing on communities and populations at the greatest disadvantage, researchers affiliated with the HTF conducted context-specific research in 13 countries—including Bangladesh, Guatemala, India, Kenya, Mexico, Pakistan, and the United States.

Committed to open science, we shared our datasets, available in four languages, on the **Population Council's Dataverse**. More than 370 institutions from 154 countries have downloaded our data, conducting analyses to gain new insights and effectively respond as the pandemic evolves.

CONTRACEPTIVE CHOICE & ACCESS

Scientists at the Population Council's **Center for Biomedical Research** ensure that contraceptive products benefit people in the places where **inequity and lack of access** are most prevalent.

In 2020, the Council and Duchesnay, a specialty pharmaceutical company, announced an exclusive **license agreement** to make **Annovera®** available in Canada, Europe, Latin America, Asia, and other territories.

From identifying unmet health needs and critical basic science research to product development and preclinical and clinical testing, and ultimately to regulatory approval, product introduction and social marketing, our **bench-to-bedside approach** benefits the people who need it most around the world.

SEXUAL AND REPRODUCTIVE HEALTH & RIGHTS

→ The Population Council expands sexual health and reproductive access and choice for all. We have a rich history of research on the many components of sexual and reproductive health, including quality of care, contraceptive services, maternal and newborn care, prevention and treatment of HIV and AIDS and other STIs, comprehensive sexuality education, sexual and gender-based violence (SGBV), and safe abortion care.

We work locally, regionally, and globally to develop, implement, and scale proven context-relevant solutions. In 2020, Council scientists developed a simple monitoring tool, through the **“SAUTI”/VOICE** project, to support SGBV programs in refugee settings in the East,

Horn, and Great Lakes region of Africa; designed a pilot solution to ensure **respectful maternity care in Zambia**, under the **Breakthrough RESEARCH** project; and conducted a comparative study of **abortion service provision** in Bangladesh, India, Nepal, and Pakistan—documenting an urgent need to increase access and improve quality of care.

Within our HIV and AIDS portfolio, our leadership in the **DREAMS Partnership** helped to reduce HIV risk among adolescent girls and young people. The **US President’s Emergency Plan for AIDS Relief 2021** cites Council research and tools for improving programs at district, national, and global levels.

GENDER EQUALITY

→ The Population Council works to change harmful gender norms. Gender norms and power imbalances underlie decisions about marriage and length of education; experiences of violence and harassment; and options for acceptable work.

Recognizing the tremendous hurdles that adolescent girls and young women face in achieving economic empowerment, in 2020, the Council evaluated **Girl Empower**, a mentoring and cash-transfer intervention in Liberia, and conducted a review of **economic empowerment programs** in low- and middle-income countries.

The Council also expanded the **Indigenous Adolescent Girls' Empowerment Network (IMAGEN)** to

strengthen the protection, safety, and resilience of girls in Native American communities. IMAGEN was featured in a **Voice of America documentary film, "The Lakota Daughters,"** and news report for Indigenous Peoples Day.

Inequitable gender norms play a powerful role in HIV risk. The Council-led **Project SOAR** project has produced a multifaceted body of evidence—for example, on the connection between **gender norms and HIV testing**—to guide the planning and implementation of programs and policies.

This year, Council researchers also advocated for more research and action to address the adverse impact of COVID-19 on **sexual and gender minority adolescents**.

QUALITY EDUCATION

→ More than two decades ago, the Population Council recognized that quality education is a key factor in gender equality and human development.

Today, the GIRL Center's **Evidence for Gender and Education Resource (EGER)** program generates, synthesizes, and disseminates research to support evidence-based programs and policies to enhance girls' education.

EGER includes an open access, searchable website that provides the latest gender and education data and evidence, and maps programs and approaches from hundreds of

organizations working across dozens of countries. The COVID pandemic has deepened existing inequalities and created even more uncertainty about the way forward in global girls' education.

Synthesizing evidence from systematic reviews and program documentation from the EGER website, in 2021 EGER published the **Girls' Education Roadmap**. The Roadmap presents insights that governments, NGOs, researchers, and donors can use to align investments with the latest evidence and greatest needs—and drive better education results for girls, boys, and communities around the world.

INCLUSIVE PROGRAMS ON CLIMATE RESILIENCE AND MITIGATION

→ The Population Council uses a gender-and-equity lens to counter the climate crisis.

The Council's initiative on **Population, Environmental Risks, and the Climate Crisis (PERCC)** investigates the complex interactions and dynamics between people and their environment and helps to ensure that programs and policies are inclusive and rooted in the principles of equity.

Research in 2020 on country-specific risks include studies on air pollution and child health in **India**; community resilience to natural disasters in **India**; climate, population, and vulnerability in **Pakistan**; and population trends and environmental and socioeconomic stresses in the **United States**. PERCC researchers also provide evidence to inform the work of global groups, including the United Nations' Intergovernmental Panel on Climate Change.

The Population Council confronts critical health and development issue—from stopping the spread of HIV to improving reproductive health and ensuring that young people lead full and productive lives. Through biomedical, social science, and public health research in 50 countries, we work with our partners to deliver solutions that lead to more effective policies, programs, and technologies that improve lives around the world.
