Introduction

The Evidence to End FGM/C Research Programme

Why a research programme on FGM/C?

- ✓ Intensive Africa-led advocacy in the past decade has led to widespread agreement on the need for intensifying efforts to end FGM/C within one generation
- ✓ Historically low levels of funding for FGM/C research has led to a global evidence base suffering from many critical gaps
- ✓ Global and national efforts to end FGM/C rapidly can be more effective and efficient when informed by high quality evidence generated through rigorous, ethical and appropriate research

Our goal for 2020

DFID's Programme 'Towards Ending FGM/C in Africa and Beyond'

3 components

- Population Council
- UNFPA-UNICEF Joint Programme on FGM/C: accelerating change
- The Girl Generation

Contribute to Impact

End to the practice in one generation and a reduction in the practice by 30% in at least ten countries within five years

Research Goal

Generate evidence to influence strategic investments, policies, and programs to end FGM/C

Duration: 2016 – February 2020

Key principles guiding our work:

---

1. Doing no harm
2. Supporting an African led movement for FGM/C abandonment
3. Understanding FGM/C within the wider context of violence and discrimination against women and girls

Geographic focus: 7 countries

Criteria

Scale of the practice: Six countries with combined population of over 90 million girls and women who have been cut, 70% of total

Represent all 5 stages of transition in abandonment

Socio-cultural variations

UNJP and TGG programming and intervention priority countries

VfM through cost-effective programme implementation:

Experienced research teams available in all six countries; Consortium managed within the region; Partners able to work in Anglophone, Francophone and Arabic contexts

Consortium Partners

More evidence needed on the best strategies for ending FGM/C including :

---

1. Knowledge of the drivers and consequences of FGM/C in specific contexts, to build a detailed understanding that also enables generalizations
2. Impact of FGM/C interventions, which requires strengthened monitoring and evaluation frameworks and systems
3. Need for more work on research methods to strengthen available data
4. Need for more attention to theory-based intervention and evaluation designs
5. Improved coordination efforts to ensure greater research utilization

Research Agenda

Four research themes

Theme 1: Building the picture

Where, when and why is FGM/C practised, and are these changing?

---

1. Identifying and explaining generational shifts in FGM/C attitudes and practice;
2. Differentiating individual and community abandonment factors with multilevel and spatial analyses;
3. How gender affects the continuation or abandonment of FGM/C;
4. Understanding the factors influencing abandonment of FGM/C;
5. Understanding shifts in the nature of the practice to sustain FGM/C.

Theme 2: Interventions

What's working, where and why?

---

1. Changing social norms through social networks, community values deliberations, and public declarations
2. De-linking FGM/C as a religious obligation and engaging religious leaders as change agents
3. Strengthening health systems to engage health professionals as change agents
4. Creating new perspectives and expectations of gender norms for uncut girls and women through multi-channel 'social marketing' campaigns
5. Legislation and policy reform as programmed interventions and/or enabling conditions

Theme 3: What are the wider impacts of FGM/C on the lives of girls, women and their families and the implications of sustaining or abandoning the practice as well as other harmful practices ?

---

1. Adverse health impacts
  - ✓ obstetric; gynaecological; sexual; mental health
2. Potential associations between FGM/C and:
  - ✓ HIV; Infertility; Fistula
3. Potential associations between FGM/C and women's sexuality and psychological well-being
4. Potential social tensions associated with rapid social norms changes
  - ✓ Early abandoners
  - ✓ Late / non abandoners
5. Whether and how FGM/C-focused interventions have wider impacts on gender relations, early marriage and violence

Theme 4: Measurement

What are valid measures of change?

---

1. Addressing the challenges of ethically and accurately measuring prevalence and FGM/C status;
2. Improving designs to evaluate complex interventions commonly used for FGM/C abandonment;
3. Enhancing the application of “*theory of change*” to evaluation of FGM/C abandonment interventions;
4. Improving the definition and measurement of social norms and norms’ changes;
5. Increasing the rigour, relevance and utility of published descriptions of FGM/C interventions and their evaluation

Implementing the research programme

Our Theory of Change

Stakeholder engagement

**Generation of high
quality evidence**

**Evidence
communication**

**Capacity building for researchers and
stakeholders**

Monitoring and evaluation

Some of the key achievements

Stakeholder engagement

Country, global, regional and Special stakeholders

Generating evidence

Social Norms Workshop for all consortium partners

The Evidence to End FGM/C programme consortium generates evidence to inform and influence investments, policies, and programs for ending female genital mutilation/cutting in different contexts.

Evidence to End FGM/C is led by the Population Council in partnership with the Africa Coordination Centre for Abandonment of Female Genital Mutilation/Cutting (Kenya); Gender and Reproductive Health & Rights Centre (Sudan); MannionDaniels, Ltd.; Population Reference Bureau; University of California, San Diego; and University of Washington. Evidence to End FGM/C is funded by UK aid by the UK Government.
