This Brief is brought to you for free and open access by the Population Council.

Government of India’s 40-day national lockdown was a necessary step towards protecting people from getting the COVID-19 infection and breaking the chain of viral transmission. However, such strict lockdown brings halt to economic activities in any place triggering loss in livelihood and bringing some hardships to the population. Often, these effects are disproportionate and most marginalised feel the effects most.

Population Council's telephone survey with participants of longitudinal studies has helped understand critical needs of households and provides supportive data for Government of Bihar and Uttar Pradesh.¹

### Challenges

About two-thirds (Uttar Pradesh: 64% vs. Bihar: 67%) reported that either themselves or their family members lost jobs/livelihood due to lockdown.

More individuals from the informal sectors in rural areas reported loss of jobs, than those in urban areas.

Loss of jobs was higher for females than males in the informal sectors, while more males lost jobs in the private sector.

![Proportion who lost jobs/income by Type of Occupation](image)

In the survey conducted in the first two weeks of April, 54% from UP and 61% from Bihar reported having resources that may last for less than 1 month and around one-third had resources to survive for less than 2 weeks.

![Proportion of participants who reported that resources would survive only for less than a month](image)

### Critical needs

Food (88%), money (44%) and medicine (17%) were the three most critical needs, irrespective of gender, state and area where the respondent lived.

Food items most needed were: rice, pulses, fruits, vegetables, milk.

![Money needs by household CONDITIONS](image)

The cash needs were greater among households where family members lost jobs/livelihood, households with non-availability of >1 month resources at home, and households where family member is stranded elsewhere.

![Medicine Needs](image)

Similarly, households with elderly members and individuals with pre-existing medical conditions reported greater needs of medicine.

### Call for those providing supportive service during COVID-19 lockdown – What can the private sector, volunteers, NGOs, and governments do to meeting critical needs besides food?

**Support those in informal sector**

Most females, primarily in the informal sector lost their jobs. Provide wage-subsidies or ensure opportunities which also help maintain social distancing in the work place.

**Provide medicines to those who need them**

Households with elderly, with pre-existing medical conditions require medicines for survival. Provide cash or free supply of prescribed medicines.

**Pay special attention to households with family members stranded elsewhere and facilitate support through respective local governments or private sector**

As social distancing also demands limited mobility of people, the needs of households as well as their (stranded) family members call for special attention, by sharing information on local support systems through Apps like Arogya Setu.
