Meeting Report of the International Conference on the Great Lakes Region’s Regional Training Facility (ICGLR-RTF) and the Population Council

Working with the Police Sector to Meet the Needs of Sexual Violence Survivors in the Great Lakes Region

Lake Victoria Serena Hotel
Kigo, Uganda

April 8-9, 2019
The ICGLR Regional Training Facility was established by 12 Member States of the International Conference of the Great Lakes Region (ICGLR) of Africa. It was set up as an implementation arm of the ICGLR to operationalize Article 6(9) of the ICGLR Protocol on the Prevention and Suppression of Sexual Violence against Women and Children (2006). It is a special regional facility for training and sensitizing judicial officers, police units, social workers, medical officers and other categories of persons who handle cases of sexual violence in the Great Lakes Region. Launched on 18 February 2014, the Regional Training Facility is based in Kampala, Uganda. It a decentralized organ of the ICGLR Secretariat based in Bujumbura, Burundi, and includes the following ICGLR Member States: Angola, Burundi, Central Africa Republic, Democratic Republic of Congo, Republic of Congo (Congo Brazzaville), South Sudan, Sudan, Kenya, Rwanda, Tanzania, Uganda and Zambia.

Background

The Regional Training Facility (referred to as ‘ICGLR-RTF’) on the Suppression of Sexual Violence was established by 12 Member States of the International Conference on Africa’s Great Lakes Region (ICGLR) an implementation arm to operationalize Article 6(9) of the ICGLR Protocol on the Prevention and Suppression of Sexual Violence against Women and Children (2006). ICGLR-RTF is a special facility for training and sensitizing judicial officers, police units, social workers, medical officers, and other persons who handle sexual violence cases in the Great Lakes Region. Launched in 2014 in Kampala, Uganda, it is a de-centralized organ of the ICGLR Secretariat based in Bujumbura, Burundi.

ICGLR-RTF partners provide financial and technical support to the institution in implementing ICGLR-RTF activities for combating SGBV in the Great Lakes Region. The Population Council is one such partner that has collaborated with ICGLR-RTF to address SGBV in the region through technical and financial support since 2016. For over a decade, Population Council and its coalition of partners (referred to as the ‘Africa Regional SGBV Network’) have provided technical assistance (TA) and conducted research to strengthen the evidence base of sexual and gender-based violence (SGBV) programming in East, Horn, and Great Lakes region of Africa. This Network of partners has continuously developed, implemented, and evaluated core elements of a comprehensive, multi-sectoral response model since 2006. This response model incorporates the shared and complementary responsibilities of core sectors (police and justice, health, education, social services). It also recognizes that while SGBV survivors require access to all available services within these sectors, it may not be feasible, appropriate, nor cost effective to deliver all of these services in one location.

Africa Regional SGBV Network studies demonstrate that police services are often the first (and sometimes only) point of contact for sexual violence survivors—and in refugee settings rates of unintended or unwanted pregnancy due to rape can be extraordinarily high. A recent Network study found that over half of refugee women in the region who reported ever experiencing non-partner rape have also experienced rape-related pregnancy as a result (56%). These realities necessitate police sector coordination with other sectors (particularly the health sector) to meet survivors’ immediate needs. Within the first 72 hours after an assault, both medical and legal responses are necessary to ensure both a survivor’s health as well as the ability to prosecute a case. The necessity of coordinating medico-legal responses within a limited time makes links between these sectors a pre-requisite for effective institutional response to sexual violence, particularly in refugee settings.

Under the Africa Regional SGBV Network, the Population Council and its partners (Zambia Police Service and Zambia Ministry of Health) developed and tested an intervention specifically including police response to sexual violence survivors, with police provision of emergency contraception (EC) for survivors who present at police stations within 120 hours of an assault involving penetrative sex, followed referrals of these survivors to a health facility for further care. This innovative response model has been successfully tested by the Network with police in Zambia and Malawi. Both studies reveal that EC provision by trained police to sexual violence survivors is both feasible and effective. During both interventions, trained Victim Support Unit (VSU) police provided EC to sexual violence survivors, with no adverse events or misuse reported. Trained VSU officers also consistently referred survivors to health facilities for further care after providing EC as appropriate.

3 EC is an essential element of post-rape care preventing unwanted pregnancy if taken within 120 hours of unprotected sex. EC contains the same hormones as oral contraceptive pills, and can be a discrete product (such as the brands Pregnon or Postinor-2) or high doses of oral contraceptives.
Results from these studies prompted the Government of Zambia to request Population Council TA to scale this model nationally, and today Zambia’s national police training curriculum specifies police EC provision. Study results also gained attention regionally, culminating in a meeting co-convened by Population Council and the East African Community (EAC)’s Department of Peace and Security, in Kigali, Rwanda, 3 to 5 December 2014. This meeting brought together police officers from the EAC, serving as a mechanism for informing them of the police-led model. The meeting resulted in a series of regional recommendations, including publicizing the model among EAC inspectors general of Police for their official endorsements.

Meeting Objectives and Participation

In response to the encouraging evaluation findings and regional recommendations for police EC provision, and prompted by the need to work more effectively with the police sector to respond to the needs of sexual violence survivors in the region, in April 2019 ICGLR-RTF and Population Council co-convened a meeting in Kigo, Uganda. This meeting aimed to:

1. Broaden awareness among police and health sector decision-makers of the innovative, police-led response model
2. Inform these decision-makers about an ongoing ICGLR-RTF initiative, for training National Trainers in each ICGLR Member State on various SGBV service delivery models, including police EC provision
3. Foster policy commitment to the promotion of this model in refugee and non-refugee settings
4. Foster expansion of the police EC provision model in East Africa refugee settings, and ultimately
5. Contribute to meeting the needs of sexual violence survivors on a wider scale.

ICGLR-RTF and Population Council worked with EAC’s Department of Peace and Security to increase the visibility of the response model among critical decision-makers in the police and health sectors, and to promote the model’s adoption in the region. The involvement of health sector decision-makers was critical, as EC use and distribution is part of the health sector’s mandate.

The meeting drew participants (n=55) from nine countries in the Great Lakes region: Burundi, Central African Republic, Democratic Republic of Congo, Kenya, Republic of Congo, South Sudan, Sudan, Uganda, Zambia. Participants included inspectors general of Police (IGPs) and their representatives, national reproductive health (RH) division heads (from Ministries of Health) and their representatives, EAC’s Peace and Security Department, and staff from ICGLR-RTF and Population Council’s Kenya and Zambia offices. Two IGP’s (from Democratic Republic of Congo and South Sudan) and two Assistant IGP’s (from Uganda and Zambia) attended, while other countries’ police sectors were represented by senior officials. Seven directors of national RH divisions also participated.

The meeting was structured around plenary sessions (which included presentations and discussion) and intra-national discussions:

- **ICGLR-RTF Training Program on Combatting SGBV: Member States’ Progress and Future Activities**
- **Member States’ Presentations on Health and Police Sector Collaborations to Address SGBV**
- **Introduction to the Africa Regional SGBV Network**
- **Emergency Contraception: A Technical Briefing**
- **The Testimony of an SGBV Survivor from the Great Lakes Region**
- **Presentation of an Innovative, Police-led SGBV Intervention: ‘The Police Provision of Emergency Contraception’ Model**
- **Police EC Provision: History of Regional Policy Engagement**
- **Police EC Provision: Discussion by Police Chiefs and MoH Representatives.**
Summary of Presentations

All presentations are in the Appendix, but this section summarizes key points from the presentations.

ICGLR-RTF Training Program on Combatting SGBV

The first presentation discussed how ICGLR-RTF is a regional Center of Excellence that trains SGBV providers from a range of sectors (police, judiciary, medical, psycho-social) to promote a regional multi-sectoral SGBV response. ICGLR-RTF draws on a cascading model, via layers of trainers until a final target group is reached. ICGLR-RTF maintains 10 regional Master Trainers, and 120 National Trainers (10 per Member State), all selected through a competitive process. Training on various aspects of SGBV response is cascaded from the regional to national level through these sets of trainers. Master Trainers monitor the National Trainers, who then directly training a range of professional providers in each country, who then ensure survivors are reached with needed service delivery approaches. Over 1,000 providers have been trained through this mechanism, in a range of professional sectors.

Member States’ Presentations on Collaborations Between Health Sectors and Police to Address SGBV

Presentations by Ministry of Health (MoH) delegates focused on existing SGBV health and police sector collaborations in each country. Presentations demonstrated that the vast majority of ICGLR-RTF Member States already recognize the importance of police and health sector collaborations, providing numerous examples. Some countries have prioritized early detection of SGBV survivors through community-based early warning systems, which foster a multi-sectoral approach and utilize mobile phones (as in Burundi), while others focus on rapid multi-sectoral services to survivors through special, non-health facility government units (e.g. ‘Mixed Unit for Rapid Intervention and Repression’ in Central African Republic).

Delegates also reported instances where the police and health sectors directly collaborate. In Kenya, police representatives act as trainers in MoH’s national SGBV training initiatives. In some countries, police are signatories on the national post-rape care form (Kenya, South Sudan), while in others police were involved in revising these forms to ease survivors’ access to justice (as in Uganda). Extant memoranda of understanding between the police and health sectors also ensure comprehensive care for survivors (South Sudan), and of medical and psycho-social management of survivors by the Ministry of Security (rather than solely under MoH), demonstrating further multi-sectoral commitment (in the Central African Republic).

South Sudan, Uganda, and Zambia have incorporated SGBV instruction in the pre-service training of their police colleges, while the Republic of Congo began planning to introduce a police-led EC intervention, but has experienced funding issues with training costs and training manual development.

Introduction to the Africa Regional SGBV Network

The Network was described as specifically comprising SGBV-focused service delivery organizations (“Network partners”) who, under Population Council leadership, work together to respond to SGBV regionally, through police stations, health facilities, schools, and communities, in additional to national policy. A mechanism for learning, exchange, and strategic action, the Network provides TA for SGBV interventions, including intervention design, capacity-building for intervention implementation, intervention monitoring, evaluation and documentation, and strategic dissemination of information for wide utilization of SGBV interventions. The Network’s focus is on countries in the East, Horn, and Great Lakes regions of Africa, representing the majority of countries in the ICGLR region. The Africa Regional SGBV Network’s current work centers on refugee settings, and transferring the Network’s tested SGBV interventions to refugee contexts, while continuing to influence policy and programming in the region.
**Testimony of an SGBV Survivor from the Great Lakes Region**

A critical part of the meeting was the live testimony by a rape survivor from Kenya. The woman’s assault occurred nearly a decade ago, and she is thriving after long term (of years) psycho-social support at the Gender-Based Violence Recovery Centre (GBVRC) at Kenyatta National Hospital, Nairobi. At the time of the incident, this survivor was an unemployed single mother, who had traveled from Nairobi to another town in response to a job advertisement. The incident occurred at an office in a multi-story building in a busy part of the city center. She entered the building to submit her application and was subsequently raped at knifepoint.

The survivor unsuccessfully sought help at a nearby police station, due to the inadequate response of the available female police officer, who evidently had no training in proper SGBV protocol. The incident occurred on a Friday and the victim was asked to return to the station on Monday. Having no support and no further information, she did not preserve her clothing nor any other evidence. Discouraged by the lack of support and traumatized by the incident, she returned home.

Several weeks later, the victim began to feel nauseated and discovered she was pregnant—which traumatized her further and led to suicidal thoughts. After several unsuccessful attempts at pregnancy self-termination, she resigned herself and had a second child. For years, she viewed the child as a symbol of her trauma and struggled emotionally. Through the painstaking support of GBVRC, she eventually found solace and is currently a successful businesswoman who shares her story with providers to put a human face to decisions affecting SGBV programming and policy.

Had the police officer the survivor encountered been trained on SGBV as well as police EC provision, the unintended pregnancy could easily have been averted, and the rape-induced trauma could have been limited. This testimony was a significant precursor to the presentation on police EC provision.

**Emergency Contraception: A Technical Briefing**

A technical briefing on EC preceded the presentation on the police EC provision model, which is based on recommendations from the International Consortium for Emergency Contraception (ICEC) and Population Council. The presentation aimed to dispel common EC myths, specifying what exactly EC is, why it is used, and how, emphasizing its safety and importance in post-rape care. An important aspect of the presentation focused on the timing of EC’s effects, such as the fact EC pills work before fertilization and do not work after the fertilization process.

**Presentation of an Innovative, Police-led SGBV Intervention: ‘Police Provision of Emergency Contraception’ Model**

The police EC provision model was developed by Population Council in collaboration with Zambia’s Police Service and MoH as part of the Africa Regional SGBV Network. The model emerged in response to findings from a Population Council formative study revealing that police in Zambia are often the first and only points of contact for survivors seeking services. Survivors were thus at increased risk for unintended pregnancy.

As a means of enhancing survivors’ access to care, the intervention specifically trained VSU police officers for provision of EC to eligible sexual violence survivors of reproductive age who present at police stations, combining this service with referrals (either through information or by actual accompaniment) to a health facility for comprehensive care. Survivors ages 10 and older are screened by VSU police officers for EC eligibility, using a checklist.

The intervention involves close collaboration between the police and health sectors, including joint training of police and health providers in addition to cross-sectoral training (with health providers training police to administer EC), EC supply for police by the health sector, joint supervision by the police and health sectors, and cross-sectoral steering committees with meetings at police stations or health facilities chaired by senior host institution staff.
A 2006 evaluation of the intervention revealed that over three years VSU police officers in the Zambia study sites successfully provided nearly 400 doses of EC to sexual violence survivors who presented at police stations, with no adverse events or complaints. The vast majority of survivors who received EC (85% were children ages 18 and younger) were also referred to a health facility for comprehensive care.

Police provision of EC has been scaled up in Zambia: It is fully integrated within the country’s current (2012) national guidelines for managing SGBV survivors, and has been incorporated in Zambia’s police pre-service and in-service training curricula.

**Police Provision of Emergency Contraception: History of Regional Policy**

This presentation reminded delegates that regional conversations about the police EC provision model began in 2014 at a police officers’ meeting convened by EAC’s Peace and Security Department and Population Council. At this meeting, police officers were informed about two Africa Regional SGBV Network police-centric models: police EC provision and multi-sectoral SGBV training of both police and health providers (led by Network partner LVCT Health). This 2014 meeting led to the 2019 convening by ICGLR-RTF and Population Council, as it culminated in recommendations to EAC chiefs of Police at their ensuing meeting, where they:

1. Directed the Secretariat to organize learning exchange visits of EAC police to Zambia’s and Kenya’s police services to facilitate adaptation of the (two police-focused Africa Regional SGBV Network) models to suit EAC or individual countries, and
2. Directed Partner States to consider incorporating the police EC provision model within the EAC Partner States’ Police Training Curriculum.

**The Police Provision of EC Intervention: Discussion by Police Chiefs and Ministry of Health Representatives**

All Member States concluded that the police EC provision model would be feasible to implement in their own countries. The table summarizes the plenary discussions and reports by individual countries:

<table>
<thead>
<tr>
<th>Member State</th>
<th>Comments on the Police EC Provision Model</th>
</tr>
</thead>
</table>
| **Burundi**                       | The model can be adopted/adapted. If community health workers can distribute EC, can police can, who must be trained. MoH and police must decide how to collaborate. Things to think about:  
• Transfer of EC from MoH to Police  
• Documentation  
• What type of training needed; who will train?  
• Must incorporate intervention in pre-service training, with refresher course  
• Referral mechanisms                                                                 |
| **Central African Republic**      | The model is feasible for implementation, and would help promote decentralization:  
• Workshop with police and their heads  
• Outline plan of action  
• Mapping of police posts close to health facilities in various regions  
• Identify SGBV training needs of police                                                                                             |
| **Democratic Republic of Congo** | It is possible to adapt this model:  
• Police in DRC have an SGBV Unit at provincial level  
• Training police at police stations and posts would be needed  
• Health facilities in proximity to police stations permit collaboration  
• Need to ensure careful oversight of the dispensing of EC by police                                                                  |

---

<table>
<thead>
<tr>
<th>Country</th>
<th>Details</th>
</tr>
</thead>
</table>
| Kenya            | It is possible to implement the model in Kenya due to existing structures (policies, etc.) and goodwill (from Independent Police Oversight Authority):  
• All police stations in Kenya have Gender Desks; then MoH supply chain; each county has health facilities. Contraceptives are free  
• The intervention should begin with the Gender Desk officers  
• Commodity supply should come from health facilities nearby police stations  
• Awareness-creation around the model at national level would be needed; can be done through police forums (‘community policing’) and the media  
• Need for a simple reporting tool for police stations, and for referral |
| Republic of Congo| • About to start implementing a police-led model involving EC, but not heard about Zambian model: Would like Network TA  
• Need funding for training and developing a manual for police and EC |
| South Sudan      | • The model is appropriate for application in South Sudan  
• Formative research needed, including baseline: Who are survivors? Where do they actually tend to report first (police, like in Zambia)? This will help identify gaps, and help sensitization and awareness-raising  
• Develop a concept note and proposal for this model |
| Sudan            | Same comments as Burundi (initial discussion together)—model is feasible in Sudan:  
• Consider transfer of EC from MoH to Police  
• Documentation  
• What type of training needed; who will train  
• Must incorporate intervention in pre-service training, with a refresher course  
• Referral mechanisms |
| Uganda           | This is a feasible model, and Uganda shall adopt it.  
• Directorate of Health resources, police clinics, health workers, training schools (curricula include SGBV), and collaborations with MoH, would make it easy to do  
• National health policy allows community EC provision, so police won’t be an issue  
• Present model to top Police Council (of which the Director of Health is part) for policy change; when Council approves, joint health and police training can occur  
• Requirements: MoH supply commitments, accurate inventories, tool development  
• Need for funding to make this model happen  
• Topics on EC provision by police can be included into their police training curricula |
| Zambia           | The Zambian delegation appreciates Member State approval of the model:  
• Next steps in Zambia include scaling up the model further (beyond the 2 regions with largest populations, Copperbelt and Lusaka). The plan is to implement the model through the police sector by targeting the country’s 10 provinces  
• Community-based distributors (CBDs) in Zambia already know how to administer EC. CBDs should therefore work with police posts as a means of scale up  
• The model is now part of both police pre-service and in-service training curricula  
• Transportation services between police stations and health facilities need to be strengthened to enhance efficacy—how outlined recently in a Network study⁶ |

### Regional Resolutions

In an unprecedented manner, the testimony of the SGBV survivor from the Great Lakes Region permeated the plenary discussion of regional resolutions developed by the delegates. Many of the resolution suggestions from delegates were prefaced by references to this testimony, and the need for the proposed resolutions.

---

Preamble

- Recognizing that SGBV is a pervasive problem in all ICGLR Member States, adversely affecting the lives of citizens
- Acknowledging the urgent health and psycho-social support needs of survivors
- Realizing that the police EC provision to sexual violence survivors has been tested elsewhere in the region (Zambia and Malawi) and has been proven feasible and effective
- We (Member States) agree on the following resolutions, urging the following:

Resolutions

1. ICGLR-RTF to support the training of a range of professionals to ensure the establishment of a multi-sectoral approach in the Great Lakes Region to combat SGBV
2. Member States’ chiefs of Police to integrate EC provision by trained police officers to sexual violence survivors within police station services in the region
3. ICGLR-RTF and its partners to support Member States to effect such integration
4. Member States’ Police chiefs and MoH to develop working relationships to facilitate integration
5. ICGLR-RTF and its partners to support formative research in selected countries to generate information to facilitate adaptation of the police EC provision model
6. ICGLR-RTF to standardize SGBV training curricula for police and health sectors in the Great Lakes
7. ICGLR-RTF to integrate the police EC provision model into training curricula
8. Population Council to widely disseminate research findings of police EC provision model in the Great Lakes region, and continue to generate and share other SGBV-related evidence
9. Member States’ chiefs of Police to ensure creation of safe spaces for attending to survivors (including both physical spaces and police attitudes), and
10. Member States to strengthen mechanisms for handling SGBV perpetrators to bring them to justice and fight impunity.

Next Steps

The regional resolutions will be employed by ICGLR-RTF and its partners as advocacy ammunition to advocate for programs, funds, and other resources to foster integration of the police EC provision model at police stations in Member States (including refugee contexts) and beyond. In collaboration with ICGLR-RTF and EAC Department of Peace and Security, the Population Council-led Africa Regional SGBV Network will explore the possibility of a regional training for ICGLR-RTF Master Trainers and EAC police trainers on the model’s implementation.

En plus des provinces de MAKAMBA, CIBIKOLO et MUYINGA, les juges et la police judiciaire collaborent avec le MURS dans la production des preuves à charger sur les cas de VBRG et les réquisitions à envisager. Un système d'alerte rapide en cas de VBRG via les téléphones portables de la commune et vers toutes les autres structures impliquées (médical, police, administration) a été mis en place dans les 3 provinces ci-dessus mentionnées.
Collaboration SANTE-POLICE

Dr. Aimé Theodore DOANHE
Médécin de Santé Publique
MD MPH RHU; LivGev
Expert SSRV VSGB

Contexte et justification

Les violences sexuelles et basées sur le genre (VSBG) ont pris de l'ampleur en 2002-2003 et entré 2012-2013 aux plus forts moments des crises militaro-politiques qui ont secoué le pays.

Les statistiques de sources autorisées et disponibles à ce jour établissent par milliers le nombre de victimes familièrement identifiées et particulièrement réparties parmi une fraction de la population la plus vulnérable.

En effet, seules les femmes et les enfants payent le lourd tribut des affres des VSBG. Cette situation alarmante a suscité les réactions des autorités centrafricaines et de la communauté internationale.

Dans le cas de la RCA, pour lutter contre l'impunité de ces graves violations des Droits de l'homme et prendre en charge les victimes des VSBG, l'engagement de la communauté internationale et des autorités centrafricaines a été matérialisé entre autres par la création de l'UMIRR.

Introduction

L'UMIRR est une structure de l'Etat Créée par décret n°13-007 du 05 janvier 2015, financée par le Programme des Nations Unies pour le Développement (PNUD), la MINUSCA et UNWOMEN.

D'une composition mixte et d'une compétence nationale, l'UMIRR a son siège à Bangui, en attendant son extension sur toute l'étendue du territoire national.

Objectif : soutenir le gouvernement centrafricain dans la lutte contre les violations graves des droits de l'homme et la protection des communautés, y compris les groupes vulnérables.

Vision

Prolonger en RCA, un cadre propice et favorisé pour la prévention et la répression des infractions relatives aux violences basées sur le genre et aux violations des droits de l'enfant, ainsi qu'à la prise en charge efficace et définitive des victimes et portant, assurer un cadre de vie idéal aux femmes et aux enfants.
Mission

L’UMIRR a trois missions principales:

- Prévenir en prenant toute mesure contre les VSBG, les violations des droits de l’enfant et d’assurer la sensibilisation de la population contre les réalités des victimes à dénoncer ces types de violences;
- Appliquer et vulgariser les outils et principes standards en matière d’enquêtes et de prise en charge intégrée des cas de VSBG et des victimes, y compris en matière de protection de l’enfant victime ou en conflit avec la loi;
- Contribuer à la répression des VSBG ainsi que des violations des droits de l’enfant dans le cadre de la chaîne pénale

Structure

L’UMIRR à une direction composée de quatre services:

- Un service de Prévention, d’Intervention et d’Alerte;
- Un service d’Enquêtes et d’Investigations;
- Un Service de Prise en Charge Médicale et Psychosociale;
- Un Service d’Assistance Juridique et Judiciaire.

MERCIE DE VOTRE AIMABLE ATTENTION

-  BONNE AGRÉMENT

Dr Youn Tebabié OUMARI
Health & Police Collaboration in SGBV Response
-Kenya

Police officers are key stakeholders in SGBV response. We have collaborated as follows:

1. Part of the trainers during SGBV trainings of Health care Providers
2. We have severally conducted police officers sensitizations on SGBV and their role in SGBV response
3. They are members of our Technical Working Group (TWG) at national level
4. They are stakeholders in the county court users committees
5. They are signatories of the Kenya Post rape care form
IMPLEMENTATION DE LA CONTRACEPTION D’URGENCE

MODELE CONGOLOIS (BC) ENTÉBÉE LE 09 AVRIL 2019

- _APPUI FINANCIER POUR L’ELABORATION DU MANUEL DE LA CONTRACEPTION D’URGENCE AU SEIN DE LA POLICE

- THANK YOU VERY MUCH
South Sudan MOH & Police collaboration in Gender and GBV:

* Partnership of appropriately trained Health and Police personnel to ensure establishment of Special Protection Units (SPU) within police stations and health facilities to provide sensitive services to GBV survivors.

* Conduct training of health and police SPU officers on appropriate GBV case management.

* Provide pre-service training on gender and GBV to all health and police personnel.

* Cooperate with Police (MOU) to ensure comprehensive services that include examination of survivors, provision of required treatment (PEF, EC, STI), collection of forensic evidence, receive complaints from GBV survivors, provide immediate psychosocial counselling.

* Cooperate with police in conducting proper investigation and documentation of GBV cases, ensuring availability and accessibility of police form B free of charge.
SGBV IN SUDAN
SUDAN

By Dr. MANAL TAHAM

Country profile

- Sudan is located in northeastern Africa.
- It is bordered to the north by Egypt, to the northeast by Ethiopia, to the east by Eritrea and Mozambique, to the south by the Red Sea, and to the west by Chad.
- Sudan is the third largest country in Africa and has had the largest population in the world since Independence.

Continuum and characteristics of the services

- MOH is responsible to provide medical responses to GBV.
- MOH and MOSA integrate and social aspect of GBV will be under MOH.
- Ministry of Justice is responsible for safety and security and legal aid of survivors.
- Police and MOH's mandate to provide SGBV services to children and families through CFPUs.

GBV health services is not institutionalized.
- Services provided include physical examination.
- Psychological examination: forensic examination only at hospital.
- Testing of HIV.
- Post-exposure prophylaxis.
- Emergency contraception.
- CME.
- Counselling.
- Reporting of GBV incidence to police is not mandatory to receive medical treatment.

Information management system

- There is no central data registry.
- Manually collecting data is available.
- No of patients received treatment reported.

THANKS
PRESENTATION BY UGANDA

Meeting the Needs of Sexual Violence Survivors in the Great Lakes Region by Working with the Police Sector.
April 8-9th 2023 Lake Victoria Serena Hotel

What has been achieved?

➢ SGBV POLICY FORMULATION
  - Government through the ministry of health formulated SGBV policy and guidelines which works as a standard of laws covering areas of screening for SGBV cases at point care
  - Reporting in the SGBV register
  - Diagnosis procedures
  - Examination, referral and report writing

Continuation

➢ Enabling laws
  - In addition to the penal code, Uganda’s parliament passed a law to enforce SGBV-related cases.

➢ Ministry of health police and JLOS
  - Spearheaded revision of police medical forms PF3A and PF24A.
  - The revised forms permitted medical practitioners other than doctors to examine survivors.

Continuation

➢ Police child and family protection units (PCFPU)
  - The force used a special unit to handle SGBV cases and is run by officers trained and oriented in SGBV area. SGBV now integrated into training schools for all police officers.

➢ Government through JLOS partnership with police CID created a fund to facilitate medical examination of SGBV.
**ZAMBIA SCALE UP PLAN**

**WHERE MODEL TESTED**
- Copperbelt and Lusaka have implemented model

**CHALLENGES IN MODEL IMPLEMENTATION**
- Limited Transport
- Supply chain – access to the drug for police sites
- High turnover of offices

**STRENGTHS IN MODEL IMPLEMENTATION**
- Presence of community-based distributors
- Model incorporated in the curriculum in Police and nursing schools (Pre-service and In-service)

**NEXT STEPS**
- Target Provincial roll-out: All provincial police stations to start EC distribution
  - Train provincial and district police officers with EC providers by Police
- Assess VUSI monthly returns to identify high incidence of rape and defilement and target those for scale-up.
- In addressing supply chain issues – MoH to support the training of Police along with CBOs in respective communities to allow trained police obtain drugs from clinics in locality of Police stations/silos.
  - Discuss this with MPAC to plan actual training for scale-up.
An introduction to the Population Council-led *Africa Regional SGBV Network*

TCGLR RTF SGBV Sensitization Meeting for Police Chiefs and National Fоrmation Heads in the Great Lakes Region
April 6-8, 2010

The Africa Regional SGBV Network

network

- A group of people or organizations that are closely connected and that work with each other
- A group of people who exchange information, contacts, and experience for professional ... purposes

What it is

- Made up of SGBV-focused service delivery organizations (*Network partners*)
- Focuses on East, Southern, and Horn of Africa region
- Working together to respond SGBV on a regional level in police stations, health facilities, schools, communities, and at policy level
- A platform for learning, exchange, and strategic action, and dissemination

Why it came about

- In response to the lack of SGBV response interventions
- Has since incorporated prevention interventions

What it does

- Provides technical assistance for SGBV interventions
  - Design
  - Capacity-building
  - Implementation
  - Evaluation and documentation
  - Strategic dissemination
  - Utilization

Where it has worked previously

(Phases I to III: 2005-2018)

- Ethiopia
- Kenya
- Malawi
- Rwanda
- South Africa
- Swaziland
- Uganda
- Zambia
- Zimbabwe
Where it is working currently

(PHASE IV: 2018-2020)

- Djibouti
- Ethiopia
- Rwanda
- South Sudan
- Sudan
- Tanzania
- Uganda
- Zambia

What it's doing now

(PHASE IV: 2018-2020)

- Focusing exclusively on refugee settings
- Moving more tested SGBV interventions into refugee settings
- Still working to influence policy and programming in the region

Thank you
**Emergency Contraception: Technical Updates**

**Meeting the Needs of Sexual Violence Survivors in the Great Lakes Region by Working with the Police Sector**

**Where: Emma Brod Population Council**

**When: 10th April 2011**

**Schedule**

- **The Next 15 Minutes...**
  - What is EC?
  - Why do women use EC?
  - Types of EC
  - ECP Regimen updates
  - How EC pills work
  - How safe EC is
  - Repeated use of EC
  - Other clinical considerations
  - Counseling Women on EC

---

**What is emergency contraception?**

- Emergency contraception (EC) refers to the use of certain contraceptive methods by women to prevent pregnancy after unprotected sexual intercourse. EC provides emergency protection (avoids pregnancy) for about 75-95% of those at risk.
- EC can reduce unwanted pregnancies that might lead to:
  - Infertility
  - Abortion
  - Teenage pregnancy
  - Maternal death
- EC is an important element in post rape care and in the PMTCT of HIV, and it is an essential component of quality FP service provision.

**Why do women use EC?**

- Condom broke
- Late for an injection
- Forgot to take daily birth control pills
- Did not obtain from sex during fertile period
- Sex was not planned
- Unable to negotiate contraceptive use with partner
- Sexual assault

Any woman who had unprotected sex and does not want to get pregnant can use EC.

---

**Types of EC**

- **Pills**
  - Levonorgestrel ECPs. 1.5mg or 0.75mg (most common type)
  - Regular oral contraceptive pills in higher doses (Yuzpe regimen)
  - Other pills (such as ulipristal acetate)
- **Copper IUD**

This presentation focuses primarily on levonorgestrel ECPs. Some common brand names include Protostin-2 and Norlevo.

---

**ECP Regimen: Updates**

- **Timeframe:** EC pills are more effective the sooner they are taken after unprotected sex, but can provide some protection for up to 5 days (120 hours).
- **Dosage:** Women can take LNG ECCs as a single dose of 1.5 mg. When using the two-pill product, women can take both pills at the same time:
  - 1 dose of 1.5 mg is as effective as 2 doses of 0.75 mg.
  - Taking 1 dose is simpler than taking 2 doses 12 hours apart.
**How EC Pills Work**

- EC pills work before fertilization.
- EC pills do not work after fertilization.
  - Fertilization
  - Implantation
  - Positive Pregnancy Test
  - Last Day of Menstrual Cycle
  - Day 1

**How Safe is EC?**
- No effect on future fertility
- No increased risk of cancer, stroke, or ectopic pregnancy
- Will not harm a fetus or cause birth defects if a woman is already pregnant

**WHO fact sheet on EC:**
“Levonorgestrel alone emergency contraception pills are very safe and do not cause abortion or harm future fertility. Side-effects are uncommon and generally mild.”

**What About Repeat Use of EC?**
- Most importantly: repeat use of EC is safe.
  - The WHO's 2015 Medical Eligibility Criteria states: “there are no restrictions on repeated use” of EC.
  - It is safe even when women take it more than once in the same menstrual cycle.
- Taking ECs is ALWAYS safer than carrying an unwanted pregnancy to term or resorting to unsafe abortion.
- Using a regular, ongoing method is recommended as the most effective way to prevent pregnancy.

**Clinical Considerations**
- Is a pregnancy test needed?
  - WHO guidance does not support pregnancy testing as a requirement for EC provision.
- When during a woman's cycle should EC be offered?
  - Anytime during the woman's cycle, as it is difficult to predict the timing of ovulation.
- Should anti-emetics be administered?
  - Prophylactic administration of anti-emetics not needed for LNG ECs.
- Who should be offered EC?
  - All female survivors of rape, no matter their age, can/should be offered EC, if they have begun menstruating or are otherwise believed to be at risk of pregnancy (see signs of secondary amenorrhea).

**Counseling Women on EC**
- What info should be provided to women?
  - Take as soon as possible, take both pills together if using the 2-pill regimen.
  - ECs are very safe and cannot cause an abortion or affect an existing pregnancy.
  - EC may cause some minor side effects which will resolve on their own. There are no long-term side effects.
  - ECs are effective but not 100%. If you do not get your period within one week of when it’s expected, see a health care provider.

**In Conclusion**

It’s always better safe than sorry.

(EC pills are so SAFE that they should ALWAYS be offered if there is ANY risk of unwanted pregnancy.)
Thank you very much!

- Any questions?

The police as part of the public health response to SGBV: An innovative task-sharing model developed in Zambia

Dr. Jonathan Kaunda Mwansa (Zambia Ministry of Health)
Dr. George Phiri (Zambia Police Services)

SGBV Elimination Project
in the Joint Action Region
Kampala, Uganda
Apr 7-9, 2005

Copperbelt Model of Integrated Care (CMIC) for sexual violence survivors

- Operations research study conducted from 2005-2008 in Copperbelt Province, Zambia
- Aimed to enhance access to services for survivors of sexual violence (SV)

Formative research: Purpose and methods

- Conducted a formative assessment in 2005 to inform the intervention:
  - Review of SV records at 33 police stations & posts and 19 health facilities in Copperbelt Province from January 2001 – December 2004

Key formative research findings from 2005

- Police often first and only point of contact for SV survivors
  - 91% of all survivors first reported to the police
  - Number of SV cases reported to the police twice as many as the number that reported to health facilities during the same period

- SV services weak at health facilities
  - 82% of cases arrived in time for emergency contraception, but only 37% received it

Possible Solution: Collaboration between police and public health sector

Overview of collaboration between the police and the public health sector

- Joint stakeholders' workshop (MoH, MHA, etc.) to review formative study findings and generate recommendations
- Initial joint training of police & health providers
- Later, cross-sectoral training (i.e., health providers trained police)
- Joint; police and health sector supervision
- Cross-sectoral steering committee, held at police station or health facility, chaired by senior staff of hosting institution

Stakeholders' workshop

- A stakeholders meeting, including representatives from Ministry of Health, Ministry of Home Affairs, Ministry of Community Development and Social Services, NGOs, and churches, was held in 2005
- Formative assessment findings were reviewed and recommendations developed for improving the response to SV across police and public health sectors
Stakeholders' workshop: Conclusions & recommendations

SV survivors at great risk of unintended pregnancy

- Police are likely to face SV survivors during the 72-hour window of opportunity for ECP
- Existing family planning policies allowed for inconsistent-based distribution or use contraceptives, including ECP

Develop pilot study to assess if Victim Support Unit police officers can safely and effectively provide SV survivors with emergency contraception pill (ECP)

On-site training

- VSU officers who attended classroom trainings were expected to return to their facilities and train any officers that did not attend

- Trained health providers assisted the VSU officers with the on-site trainings

ECP provision at police stations and posts

Each station given a set of basic supplies:
1. Secured locked box for ECP
4. ECP commodities & instructions

Excerpt from client screening checklist

Adapted from Resources for Emergency Contraceptive Programming: A Pocket PATH 2004

1. Was the client raped/abused? Yes (go to 2) No Client not eligible
2. Did the assault occur within 72 hours? Yes (go to 7) No Client not eligible
3. Did the assault occur within the past 72 hours? Yes (go to 7) No Client not eligible
4. Has the client had her first menstrual period? Yes (go to 9) No Client not eligible
5. Does the client want to prevent pregnancy? Yes (go to 9) No Client not eligible
6. Is the client currently pregnant? Yes (go to 8) No Client not eligible
7. If client answered 'YES' to questions 1-6, she is eligible for ECP. Proceed if client answered' NO' to ANY of the questions above, she is not eligible STOP

Joint police and health sector supervision

- District reproductive health coordinator and VSU coordinator conducted monthly supervisory visits to each participating police station & post:
  - Collected monthly reporting forms
  - Reviewed all ECP checklists for accuracy and proper ECP provision
  - Provided support & discussed challenges with VSU officers
  - Re-supplied ECP stocks and forms as needed
**Result 1** (analysis of service statistics and checklists)
Police safely and effectively provided EC

- 357 doses of EC provided to SV survivors over 3 years
- No adverse events or complaints
- All doses provided to women and girls of reproductive age; never given to girls below age 10 (per study protocol)

**Result 2** (analysis of service statistics)
Police referred clients at high rates

- Intervention definition of “referral”: provision of info on services available at health facilities, or accompanying survivor to a health facility

**Reflections**

- **Surprising fact…**
  - Most survivors reporting to police were adolescents
  - 49% < age 14; 85% < age 19

- **Could’ve done better if…**
  - We could control turnover of trained police

- **Need to think more about…**
  - How to address transportation needs of referred clients

**How this intervention has been scaled up so far**

- Replicated successfully by police in Malawi (2011-2012)
- Incorporated into Zambia’s national guidelines for managing SGBV survivors (2012)
- EC provision by police is included in Zambia’s police training curriculum for new recruits
- The intervention is being considered by UNHCR Regional Service Center for replication in selected refugee settings in the East & Horn of Africa region

EAST AFRICAN COMMUNITY

Meeting the Needs of Sexual Violence Survivors in the EAC Region Through Working with the Law Enforcement--The Police Forces/Service

By:
ACP Didacus B. Kaguta
Department of Peace and Security,
EAC Secretariat

Goal of the Workshop

➢ To provide a forum for Police and Ministry of Health stakeholders to interact and explore ways of strengthening SGBV interventions within the EAC region.
➢ To explore the possibility of expanding two key interventions in SGBV across the EAC, in order to meet the needs of sexual violence survivors in the region.

1st Interventions

➢ Provision of emergency contraception (EC) by trained Police to SGBV survivors within 120 hours of an assault involving penetrative sex, followed by referral of these survivors to a health facility for further care.
➢ Police in the EAC region mostly first responders to survivors of SGBV and can therefore play an important role in pregnancy prevention for survivors of rape and domestic violence and HIV prevention (PEP).
➢ Model been successfully tested with Police in Zambia and Malawi with excellent feasible & effective results (no adverse effects or misuse).
➢ Outcome resulted prompted Zambia to scale up the model country wide, including PEP for HIV.
➢ The EC model been now integrated in the National police training curriculum in Zambia.

2nd Intervention

➢ Involves a multi-sectoral provider training model to improve the collection, documentation, and utilization of medical-legal evidence.
➢ This training model (involving police and health providers) was tested in Kenya by LVCT Health in collaboration with the Ministry of Health and the police.
➢ Results: significant improvement in police and health providers accurately completing relevant police forms and post-rape care forms for survivors.
➢ Proper completion of these forms enhanced survivors’ access to justice and facilitated timely prosecution of offenders.

Rep of Burundi

➢ Police receives the victim and provides a referral to the public hospital, whose findings facilitate court processes.
➢ There are plans to establish a one-stop center in Burundi.
➢ There is need to recruit more female police, as there are few in the country.
➢ Burundi had 5 regions with 17 units. Each unit has a dispensary, but the health service provision is not adequate.

Rep of Kenya

➢ Most laws in place.
➢ Need to create a one-stop center for survivors at County level, staffed with medical personnel, police, and paralegals staff.
➢ Joint training for police, magistrates, community leaders, chiefs on SGBV.
➢ SGBV be incorporated into pre-service police training.
➢ Develop a multi-sectoral training manual for the country on SGBV.
Rep of Rwanda

- RNP has Isenge one stop centre, which works closely with police and is situated in a Police Hospital.
- Isenge is an EAC Regional Centre of Excellence on SGBV & currently finished developing the Regional SOPs on GBV.
- All services at this Center are free, and the OSC itself provides basic SGBV training.
- SGBV part of the initial training curriculum in RNP.
- Need for Joint training for Police officer on SGBV investigative techniques.
- Need constant in-service trainings on SGBV specialized skills & state up nationwide.

United Rep of Tanzania

- Have a training manual to train police specifically on how to respond to children and women victims of SGBV.
- SGBV is incorporated into the police training curriculum.
- Two One-Stop Centers for SGBV have been established in the country.
- Need to train police officers who work at gender and child protection desks on police provision of EC model.
- SGBV should be incorporated in both advanced/promotional & command courses training.

Rep of Uganda

- SGBV has been incorporated into the initial training for police in Uganda.
- Regions and Metropolitan area have access to EC and each District Police station has a medical unit.
- Each district has a dedicated Gender desk to handle Child and Family Protection Services including SGBV.
- Need to conduct a feasibility study to see how the police provision of EC is working.
- Kenyan model been going on in Uganda, but with limitations on escorting victims to the health facility and recovering the PFMA from the doctors.

General Observations

- Benchmark with 2 response models (Zambia & Kenya) by all Partner States.
- Joint training on EC by EAC and Pop Council to enhance convergence in investigations of SGBV.
- National scale up of sensitisation by a multi-sectoral partnerships very important.
- Integration of SGBV in all training programmes of police at all levels.
- Develop a single joint, standard training manual for EAC Partner States on SGBV.
- SGBV cases on the increase in all Partner States - need to develop comprehensive interventions at both national and regional levels to respond effectively.
- Address Police attitudes towards SGBV.

Recommendations

1. Direct the EAC Secretariat to mobilize resources and facilitate multi-sectoral trainings at national and regional levels on sexual and gender-based violence to enhance national and regional responses.
2. Direct the Secretariat to Partner with Population Council and organize learning exchange visits of the EAC police to Zambia Police Services and Kenya Police Service to facilitate the adoption of the models described above to suit the EAC context and individual country contexts.
3. Direct the Secretariat to convene a meeting of experts drawn from Partner States to develop a regional training manual and Standard Operating Procedures on SGBV.
4. Organize Command Post exercises in response to SGBV at the finalization of the above manual and SOPs.
**Recommendations cont'd**

5. Direct Partner States to consider incorporating the police provision of EC model into the EAC Partner States Police Training Curriculum;
6. Direct Partner States to incorporate SGBV education into the community policing function;
7. Direct Partner States who have not established One-Stop Centers on SGBV to do so;
8. Direct the Secretariat to adopt the EAPCCO Standard Operating Procedures on SGBV into EAC Instruments
9. Direct the Secretariat to establish a Thematic Working Group on Gender to address SGBV related issues in the region.
10. Direct Partner States police services to collaborate closely with other stakeholders to foster strong multi-sectoral coordination in SGBV and related caustive crimes.

**Legal basis & Related Initiatives**

- Initiatives on SGBV anchored in the provisions of the Treaty.
- Responses on SGBV cuts across many sectors of EAC such as Health, immigration, social sectors, Peace and security, etc.
- The EAC gender policy recognizes gendering P&S Protocol, institutionalization of gender parity in peace & security negotiations/mediation including addressing issues of SGBV
- EAC-APSAP support Programme provides for implementation of the UNSCR 1325 which encompasses issues of Gender including SGBV
- So far trained two groups (62) Women security Officers on 1325 and managing conflict situations where SGBV is one of the issues high on the agenda, 3rd training upcoming soon.

**Related Initiatives**

- Establishing Gender forum by 3rd quarter of 2019 and a gender thematic group to steer various gender-related responses.
- Draft EAC Regional Framework on UNSCR 1325 to be concluded and adopted this year by the Council of Ministers
- Regional Center of Excellence on SGBV finalized SOPs on SGBV. Now drafting its Regional training manual.
- Stakeholders in SGBV multi-sectoral in nature, coordinated by the Interstate Security.
- Main stakeholders at EAC Peace & Security (Police, Immigration, prisons, GAL) Health, EALA, EACJ, CTC.
