The Population Council is an international, nonprofit, nongovernmental institution that seeks to improve the well-being and reproductive health of current and future generations around the world and to help achieve a humane, equitable, and sustainable balance between people and resources. The Council conducts biomedical, social science, and public health research and helps build research capacities in developing countries. Established in 1952, the Council is governed by an international board of trustees. Its New York headquarters supports a global network of regional and country offices.

Foreword

The Population Council initiated its work on adolescents in earnest in the mid-1990s. At that time, those advocating greater attention to adolescent issues were concerned about adolescent fertility—particularly fertility outside of marriage—and, responding to the experiences of Western countries, about adolescent “risk-taking” behavior. As an international scientific organization with its mandate centered around the needs of developing countries, the Population Council sought a more nuanced and context-specific understanding of the opportunities and problems confronting adolescents in the developing world.

As a first step, the Council published a book titled *The Uncharted Passage: Girls’ Adolescence in the Developing World* (Mensch, Bruce, and Greene, 1998). In working with our colleagues inside and outside of the Council, at national and international levels, it became clear that information on adolescents, and the way data are organized, were limiting our ability to understand the diversity of their experiences or to develop programs to address that diversity. Even the words used to describe the 10-19-year-old age group (in English) presented an obstacle. Terms such as youth, adolescents, young people, and teenagers are gender-free. An age group spanning a decade was singularly inappropriate given the rapidity of transitions in this period; even five-year cohorts (10-14 and 15-19) are arguably unreasonably large.

While recognizing these limitations, we nonetheless saw the Demographic and Health Survey results as extremely useful to those seeking to understand and plan for adolescents, provided the data were organized with full understanding of their strengths and weaknesses. In the absence of data, many adolescent policies were implicitly based on the premise that the lives of adolescents in developing countries were like those of adolescents in Western countries; that is, mainly living at home with families, not working, in school, and unmarried. In fact there are significant numbers of young people in the West who do not fit this description, but even larger groups within the developing countries. Perhaps the starkest difference is the context of sexual activity: whereas the vast majority of sexually active adolescent girls in the West are unmarried, in the developing countries the vast majority are married.

In dialogue with colleagues at UNICEF, UNFPA, and PATH, and with the financial support of the United Nations Foundation, we have created tables to more clearly describe the diversity of the adolescent experience by drawing on the rich Demographic and Health Survey data. These tables are descriptive. We have included small points of commentary where something is particularly striking. We offer them to you for reflection, as a basis for developing programs, and as a basis, indeed, for arguing for an enrichment of the research attention devoted to the many transitions that occur between the ages of 10 and 19.

In addition to highlighting, wherever we could, salient dimensions and experience (e.g., schooling, work, and marital status) by age, gender, urban/rural, and economic class groupings, we also draw attention to adolescents’ living arrangements and the

shape of their families. Earlier work conducted cooperatively between the Council's International Programs and Policy Research Divisions highlighted some very surprising—often counterintuitive—facts about the “family.” Whether adolescents live with one, both, or neither parent, and whether they live with and are responsible for their younger siblings, significantly shape their schooling, work, and migration status. With increasing levels of rural-to-urban migration, and the AIDS epidemic, families under stress may tend to transfer adult burdens to their oldest children—especially to girls. Adolescent girls may be required to leave school or work for wages, sometimes in unsafe ways and away from their homes.

Another often neglected dimension of the “adolescent problematique” is the contrast between the experience of married and unmarried adolescents. Very often the experiences of married and unmarried adolescents are considered together—for example, on issues such as their level of information about and use of contraceptives. We believe that married and unmarried adolescents represent significantly different populations. Although differences between the groups may vary by topic, the difference between them is the point. In treating the adolescent population as homogeneous, the profile and needs of married adolescents have very often been completely ignored. Married girls are plausibly the most vulnerable adolescents. Detached from a supportive peer group and from their natal or native home, often married by arrangement and facing a first pregnancy, married adolescent girls deserve our attention. The tabulations presented for some countries provide preliminary and rudimentary evidence that married adolescents are, if not at greater disadvantage than their unmarried counterparts, at least different, and we should plan for those differences.

This project will be ongoing. As data for additional countries and more recent data for the countries covered here become available, we will produce new sets of tables. And as we identify other tables of potential interest we will include them. We welcome your feedback and hope you find these tables useful.

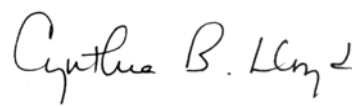

Finally, we would like to acknowledge the significant creative and analytic efforts of our colleagues in producing these tables. We thank Brian Pence, Carey Meyers, Erica Chong, Christine Pace, and Roberta Scheinman for their intellectual contributions and hard work in this undertaking.

Technical Notes:

1. All tables in this report are calculated from data collected for the 1997 Jordan Population and Family Health Survey (JPFHS), conducted by the Jordan Department of Statistics and Macro International, Inc. The JPFHS surveyed a nationally representative sample of 7,335 households. The information presented in Tables 1-7 is based on all usual residents within the age group(s) of the selected households. The calculations for Tables 8-12 are based on 5,548 currently or formerly married women between the ages of 15 and 49 who responded to a more detailed individual questionnaire. Data on experience with sexually transmitted diseases and female genital circumcision were not collected for Jordan.

More information on the design of and results from the 1997 JPFHS is provided in the final report (Department of Statistics [Jordan] and Macro International, Inc. 1998. *Jordan Population and Family Health Survey 1997*. Calverton, Maryland, USA: Department of Statistics and Macro International, Inc.) More information on the Demographic and Health Surveys, including reports, other publications, and original data, is available on the DHS Web site at <http://www.measuredhs.com/>.

2. The tables report values for which data are available for the 1997 JPFHS. An X indicates that the information was not collected for that group in the 1997 survey.
3. Unless specifically designated as “percent distribution,” the cells represent percentages that do not sum to 100%. In most cases, the categories either are not mutually exclusive or do not exhaust the total population for the group. A guide to reading and interpreting the tables is included at the bottom of each page.
4. The measurement of economic status used to define the poorest 40%, middle 40%, and richest 20% of households in Tables 4-6 is based on a methodological approach discussed in Filmer, Deon and Lant Pritchett, 1999: “The Effect of Household Wealth on Educational Attainment: Evidence from 35 Countries,” *Population and Development Review*, vol. 25(1): 85-120. Derived from their work, indicators of household asset ownership (car, bicycle, television, etc.) and household characteristics (piped water, electricity, etc.) were used to create a single measure of economic status. Although the classification of economic status can be used for relative comparisons of socioeconomic groups within a country, comparisons of groups across countries are not appropriate.

A Summary of 1997 DHS Data on Adolescents in Jordan

Table 1. Urban-Rural Residence and Population Distribution

- Adolescents ages 10-19 comprise almost one-quarter of Jordan's total population.
- Around four-fifths of Jordan's adolescents live in urban areas.
- Similar percentages of boys and girls live in urban areas; this is true for both age cohorts.

Table 1. Urban-Rural Residence Distribution

Table 2. Parental Survival Status and Residence in Household

- Nearly all of Jordan's 10-14-year-olds have both parents still living and almost nine out of ten live with both parents.
- Adolescents 10-14 years old who live with only one parent are more likely to live with only their mother than with only their father.
- Less than 3% of 10-14-year-olds live in households in which neither parent is present; girls and boys are about equally likely to live in such households.

Table 2. Patterns of Parent/Child Co-residence

Table 3. Characteristics of Head of Household

- Less than 10% of adolescents ages 10-19 live in female-headed households. Adolescents ages 15-19 are slightly more likely to live in female-headed households than 10-14-year-olds.
- About one out of sixteen adolescents 10-14 years old lives in a household headed by someone other than a parent.

Table 4. Educational Enrollment and Attainment

- For both sexes, a much greater percentage of 15-19-year-olds are not in school than 10-14-year-olds.
- Similar proportions of boys and girls are enrolled in school.
- Educational attainment for Jordanian adolescents is very high for both boys and girls; almost all adolescents ages 15-19 completed at least four years of school, and more than nine out of ten completed primary school.
- There is a positive relationship between economic status and educational attainment among both boys and girls, however this relationship is not extremely apparent as even adolescents from the poorest 40% of households have high levels of educational attainment.

Tables 5-7. Educational Enrollment and Attainment in Urban and Rural Areas

- Similar levels of urban adolescents and rural adolescents are enrolled in school.
- While boys ages 15-19 in rural and urban areas are about equally likely to complete primary school, urban girls ages 15-19 are more likely to complete primary school than rural girls in the same age group.
- The positive relationship between economic status and educational attainment is slightly stronger in rural areas than it is in urban areas.

Tables 5 and 6. Educational Attainment

Urban youth 15-29 completing 4+ years of school

Rural youth 15-29 completing 4+ years of school

Girls

Boys

Table 7. Educational Enrollment

Table 8. Marital Status

- While 8% of girls 15-19 years old are currently married or in a cohabiting union, almost no boys in the same age group (0.2%) are.
- Half of girls 25-29 years old were married by age 23.1.
- Slightly greater percentages of girls ages 25-29 were married by ages 15, 18, and 20 than girls ages 20-24.

Table 8. Age at Marriage

Table 9. Childbearing

- More than two-thirds of ever-married girls ages 15-19 have been pregnant, but less than half have ever had a child.

Table 10. Educational Enrollment and Work Status

- Nearly all married girls are neither working nor in school.
- Married girls without children are about twice as likely as married girls with children to be in school.
- A small number (2%) of married girls with children are working. No married girls without children are working.

Table 10. Educational Enrollment and Work Status

Table 11. Awareness and Use of Modern Contraceptive Methods

- All ever-married girls ages 15-19 have heard of a modern contraceptive method, but only 19% have ever used one.

Table 12. Awareness of HIV/AIDS

- Nearly all ever-married girls 15-19 years old (98%) have heard of HIV/AIDS.
- Of those who have heard of HIV/AIDS, more than half know that a healthy-looking person can have HIV/AIDS.
- Very few girls (5%) perceive themselves to be at a moderate or great risk of getting the virus.

Table 1
Urban-Rural Residence and Population Distribution

	Percent Distribution			Percent of Total Population
	Urban ^a	Rural ^a	Total	
Girls				
10-14	81.8	18.2	100.0	6.2
15-19	81.9	18.1	100.0	5.8
Boys				
10-14	80.2	19.8	100.0	6.5
15-19	80.1	19.9	100.0	6.3

^a Refer to the DHS report cited in the Technical Notes for the definitions used for urban and rural areas.

Guide to reading the table:

- In the first column of percentages (under “Urban”), read the first number as the percentage of girls 10-14 years old who live in urban areas.
- In the fourth column of percentages (under “Percent of Total Population”), read the first number as the percentage of the total population who are girls 10-14 years old.

Table 2
Parental Survival Status and Residence in Household
(Percent Distribution)

Parental Survival Status						
	Both Parents Alive	Father Alive, Mother Dead	Mother Alive, Father Dead	Neither Parent Alive		Total
Girls						
10-14	95.2	1.1	3.6	0.1		100.0
15-19	X	X	X	X		X
Boys						
10-14	95.8	0.7	3.4	0.1		100.0
15-19	X	X	X	X		X
Parents Resident in Household^a						
	Both Parents in Household	Father Only in Household	Mother Only in Household	Neither Parent in Household		Total
Girls						
10-14	87.4	2.0	7.8	2.8		100.0
15-19	X	X	X	X		X
Boys						
10-14	89.4	1.5	6.7	2.4		100.0
15-19	X	X	X	X		X

^a An adolescent is defined as not living with a parent if the parent is deceased or does not live in the household in which the adolescent resides.

Guide to reading the table:

- In the first column of percentages in the upper panel (under “Both Parents Alive”), read the first number as the percentage of girls 10-14 years old whose parents are living.
- In the first column of percentages in the lower panel (under “Both Parents in Household”), read the first number as the percentage of girls 10-14 years old who live in households where both parents reside.

Table 3
Characteristics of Head of Household^a
(Percent)

	Female Household Head	Non-Parent Household Head
Girls		
10-14	7.3	6.5
15-19	9.1	X
Boys		
10-14	6.2	5.7
15-19	8.8	X

^a The head of each household was identified by the member of that household responding to the household survey.

Guide to reading the table:

- In the first column of percentages (under “Female Household Head”), read the first number as the percentage of girls 10-14 years old who live in households with a female head.
- In the second column of percentages (under “Non-Parent Household Head”), read the first number as the percentage of girls 10-14 years old who live in households with someone other than their mother or father as head.

Table 4
Educational Enrollment and Attainment

	Current Enrollment (Percent Distribution)				Total
	Not in School	In Primary ^a	In Secondary ^b	In Higher	
Girls					
10-14	3.4	53.6	43.0	0.0	100.0
15-19	29.4	0.4	63.4	6.8	100.0
Boys					
10-14	3.3	52.8	43.9	0.0	100.0
15-19	34.2	0.4	60.5	4.9	100.0

	Educational Attainment (Percent)	
	Completed 4+ Years	Completed Primary School
Girls		
15-19	97.5	92.8 ^d
20-24	97.4	93.8
25-29	95.0	91.2
Girls 15-29		
Poorest 40% ^c	95.0	88.8
Middle 40%	97.5	94.3
Richest 20%	98.6	96.8
Boys		
15-19	98.0	92.0 ^d
20-24	96.1	91.3
25-29	95.1	92.0
Boys 15-29		
Poorest 40% ^c	93.7	87.2
Middle 40%	98.1	93.6
Richest 20%	99.1	97.4

^a Primary school in the Jordan DHS data is delineated as 6 years. However, the UNESCO World Yearbook and the DHS report for Jordan indicate that primary school is 10 years. The 6-year delineation is used in these tabulations.

^b Secondary school in the Jordan DHS data is delineated as 6 years. However, the UNESCO World Yearbook and the DHS report for Jordan indicate that secondary school is 2 years. The 6-year delineation is used in these tabulations.

^c For an explanation of these categories, refer to the Technical Notes at the beginning of this document.

^d Because some 15-19-year-olds may still be attending primary school, caution should be used when comparing primary school completion rates of 15-19-year-olds to completion rates in older age groups or across countries.

Guide to reading the table:

- In the first column of percentages in the upper panel (under “Not in School”), read the first number as the percentage of girls 10-14 years old who are not currently enrolled in school.
- In the first column of percentages in the lower panel, read the fourth number (opposite “Poorest 40%”) as the percentage of girls 15-29 years old in the poorest 40% of households who have completed four or more years of formal education.

Table 5
Educational Enrollment and Attainment in Urban Areas^a

	Current Enrollment (Percent Distribution)				Total
	Not in School	In Primary ^b	In Secondary ^c	In Higher

10-14	45.0	34.2	0.0	0.0
15-19	64.3	59.3	7.4	4.1
Boys				
10-14	44.1	43.1	0.0	0.0
15-19	60.7	59.6	5.0	4.4

^a Refer to the DHS report cited in the Technical Notes for the definitions used for urban and rural areas.

^b Primary school in the Jordan DHS data is delineated as 6 years. However, the UNESCO World Yearbook and the DHS report for Jordan indicate that primary school is 10 years. The 6-year delineation is used in these tabulations.

^c Secondary school in the Jordan DHS data is delineated as 6 years. However, the UNESCO World Yearbook and the DHS report for Jordan indicate that secondary school is 2 years. The 6-year delineation is used in these tabulations.

Guide to reading the table:

- In the first column of percentages in the upper panel (under “Not in School: Urban”), read the first number as the percentage of girls 10-14 years old living in urban areas who are not currently enrolled in school.
- In the second column of percentages in the upper panel (under “Not in School: Rural”) read the first number as the percentage of girls 10-14 years old living in rural areas who are not currently enrolled in school.

Table 8
Marital Status
(Percent Distribution)

	Never-Married	Currently Married	Separated, Divorced, or Widowed	Total
Girls				
10-14	X	X	X	X
15-19	91.5	8.3	0.2	100.0
Boys				
10-14	X	X	X	X
15-19	99.8	0.2	0.0	100.0
	Married by Age 15 (Percent) ^a	Married by Age 18 (Percent) ^a	Married by Age 20 (Percent) ^a	Median Age at First Marriage (Years)
Girls				
20-24	0.9	13.5	26.5	N/A ^b
25-29	1.7	14.4	28.4	23.1
Boys				
20-24	X	X	X	X
25-29	X	X	X	X

^a Defined as the percentage of girls in each age group who were married by their 15th, 18th, or 20th birthday, respectively.

^b Less than 50% of 20-24-year-old girls were married by age 20.

Guide to reading the table:

- In the first column of percentages in the upper panel (under “Never-Married”), read the second number as the percentage of girls 15-19 years old who have never been married.
- In the first column of percentages in the lower panel (under “Married by Age 15”), read the second number as the percentage of girls 25-29 years old who were married by their 15th birthday.
- In the last column of percentages in the lower panel (under “Median Age at First Marriage”), read the second number as the age by which 50% of girls 25-29 years old were married.

Table 9
Childbearing
(Percent of Ever-Married^a)

Girls	Ever Pregnant^b	Ever Had Child
10-14	X	X
15-19	70.0	48.6

^a“Ever-married” refers to girls who are currently married, separated, divorced, or widowed.

^b The DHS collected information on past live births and current pregnancy status at the time of the interview. Information was not collected on miscarriages, stillbirths, or abortions, and hence is not included in the calculation of “ever pregnant.” This statistic, therefore, is likely to be an underestimate of the true percentage of girls who have ever been pregnant.

Guide to reading the table:

- In the first column of percentages (under “Ever Pregnant”), read the second number as the percentage of ever-married girls 15-19 years old who have ever been pregnant.

Table 10
Educational Enrollment and Work^a Status^b
(Percent Distribution)

10-14	X	X	X	X	X
15-19	95.2	4.8	0.0	0.0	100.0
Married^c, With Children					
Girls					
10-14	X	X	X	X	X
15-19	95.5	2.1	2.4	0.0	100.0

^a Work is defined as both formal and informal, and excludes housework. It includes activities that are paid in cash or in kind, as well as work for the family farm or business.

^b Information on work and parental status was not collected for boys.

^c "Married" refers to girls who are currently married.

Guide to reading the table:

- In the first column of percentages in the upper panel (under "Married, Without Children: Not in School, Not Working"), read the second number as the percentage of married girls 15-19 years old, without children, who are neither in school nor working.

Table 11
Awareness and Use of Modern Contraceptive Methods
(Percent of Ever-Married^a)

	Heard of a Modern Method of Contraception^a	Ever Used a Modern Method^b
Girls		
10-14	X	X
15-19	100.0	19.1
Boys		
10-14	X	X
15-19	X	X

^a“Ever-married” refers to girls who are currently married, separated, divorced, or widowed.

^b“Modern methods” of contraception include the oral contraceptive pill, intrauterine device, injections, diaphragm/foam/jelly, condom, female sterilization, male sterilization, and implants, including Norplant[®].

Guide to reading the table:

- In the first column of percentages (under “Heard of a Modern Method of Contraception”), read the second number as the percentage of ever-married girls ages 15-19 who have heard of a modern method of contraception.

Table 12
Awareness of HIV/AIDS
(Percent of Ever-Married^a)

	Heard of HIV/AIDS	Know Someone Who Has or Has Died of HIV/AIDS ^b
Girls		
10-14	X	X
15-19	98.2	X
Boys		
10-14	X	X
15-19	X	X
	Know a Healthy-Looking Person Can Have HIV/AIDS ^b	Perceive Themselves to Be at Moderate or Great Risk of HIV/AIDS ^{b,c}
Girls		
10-14	X	X
15-19	51.9	5.2
Boys		
10-14	X	X
15-19	X	X

^a “Ever-married” refers to girls who are currently married, in union, separated, divorced, or widowed.

^b These calculations exclude those who have not heard of HIV/AIDS.

^c Respondents were asked whether they think their risk of getting AIDS is small, moderate, great, or whether they have no risk at all. Respondents could also volunteer the information that they were infected with HIV. These latter respondents were excluded from the calculation.

Guide to reading the table:

- In the first column of percentages in the upper panel (under “Heard of HIV/AIDS”), read the second number as the percentage of ever-married girls 15-19 years old who have heard of HIV/AIDS.

Table 13
Experience with Sexually Transmitted Diseases (STDs)
(Percent of Ever-Married)

	Heard of an STD	Have Had an STD in Last 12 Months	Sought Advice During Last Episode of an STD
Girls			
10-14			
15-19			
Data not collected for Jordan			
Boys
